

## Manual

# **Sherlock AX**

Kit for DNA purification from materials with trace content of DNA (blood and saliva stains, hair, fur, tissue preserved in paraffin and formalin, fresh tissue, fresh and frozen blood).

Procedure with DNA precipitation.

catalog#	size
095-25	25 isolations
095-100	100 isolations

For research use only.

#### Guarantee

A&A Biotechnology provides a guarantee on this product.

The company does not guarantee the correct performance of this kit in the event of:

- not adhering to the supplied protocol
- use of not recommended equipment or materials
- use of other reagents than recommended or which are not a component of the product
- use of expired or improperly stored product or its components

## **Contents**

component	095-25	095-100	storage
Spin 10AX columns	25 pcs	100 pcs	2-8 °C
Filter 1 filtration columns	25 pcs	100 pcs	15-25 ℃
2 ml tubes	50 pcs	200 pcs	15-25 ℃
L1.4 lysis solution	9 ml	36 ml	15-25 ℃
K2 wash solution	40 ml	160 ml	15-25 ℃
K3 elution solution	23 ml	92 ml	15-25 ℃
Precipitation enhancer	300 µl	1.2 ml	15-25 ℃
TE buffer	1.5 ml	5 ml	15-25 ℃
Isopropanol	20 ml	80 ml	15-25 ℃
Proteinase K	600 µl	2 x 1.1 ml	4-8 °C

The binding capacity of the minicolumn is  $10 \, \mu g$ .

## Additional equipment and reagents

## **Necessary**

- 1.5 ml sterile Eppendorf tubes
- Sterile water (cat. # 003-075, 003-25)
- 1M DTT (cat. # 2010-5, 2010-25, 2010-10P)
- 70% ethanol
- Hexane / xylene / 96% ethanol (for paraffin embedded tissue)
- Vortex
- Microcentrifuge
- Incubator or thermoblock set to 50 °C

## **Optional**

Tris buffer (10 mM, pH 8.0)

2

## **Material preparation**

### Forensic samples

- 1. Transfer dried sample (blood, saliva, sperm) to a 1.5 ml tube (not included).
- 2. Add:
  - 300 µl of sterile water (not included),
  - 300 µl of L1.4 lysis solution,
  - 20 µl of proteinase K.

For sperm samples: add 20 µl of 1M DTT (not included).

- 3. Vortex for 20 s.
- 4. Incubate for 60 min at 50 °C. Vortex the sample from time to time.
- 5. Follow point 1. of the isolation protocol.

#### Blood (fresh or frozen)

1. Transfer 300 μI of blood to a 1.5 ml tube (not included).

Note: for blood volume less than 300  $\mu$ l, add sterile water to a total volume of 300  $\mu$ l.

- 2. Add 300 µl of L1.4 lysis solution and 20 µl of proteinase K.
- 3. Vortex for 20 s.
- 4. Incubate for 10 min at 50 °C. Vortex the sample from time to time.
- 5. Follow point 1. of the isolation protocol.

#### Fresh tissues

- 1. Transfer up to 10-20 mg of fragmented tissue to a 1.5 ml tube (not included).
- 2. Add:
  - 300 µl of sterile water (not included),
  - 300 µl of L1.4 lysis solution,
  - 20 µl of proteinase K.
- 3. Vortex for 20 s.
- 4. Incubate for 1-2 h at 50 °C. Vortex the sample from time to time.
- 5. Follow point 1. of the isolation protocol.

#### Paraffin embedded tissues

- 1. Transfer the tissue in a paraffin block to a 1.5 ml tube (not included).
- 2. Add the appropriate amount of xylene or hexane (not included) to immerse the sample completely.
- Mix the sample by inverting the tube and wait to dissolve the visible wax.
   Centrifuge for 20 s at 10 000 RPM, discard the supernatant. Repeat dewaxing 2-3 times.
- Remove residual hexane / xylene by washing twice with 96% ethanol (not included).
   Remove residual ethanol by keeping the tissue sample for 2-5 min at room temp.
- 5. Follow point 2. of the material preparation protocol fresh tissues.

For embedded tissues we recommend Xpure FFPE micro (cat. # 091-50) - kit for genomic DNA purification from tissues preserved in paraffin. Fast deparaffinization without xylene and hexane.

### Formalin fixed tissues

- 1. Transfer the tissue to a 1.5 ml tube (not included).
- 2. Add the appropriate amount of xylene or hexane (not included) to immerse the sample completely.
- Mix the sample by inverting the tube.
   Centrifuge for 20 s at 10 000 RPM, discard the supernatant. Repeat 3-4 times.
- 4. Follow point 2. of the material preparation protocol fresh tissues.

#### Hair, fur

- 1. Cut hair, fur into small ~0.5 pieces and transfer to a 1.5 ml tube (not included).
- 2. Add:

300 µl of sterile water (not included),

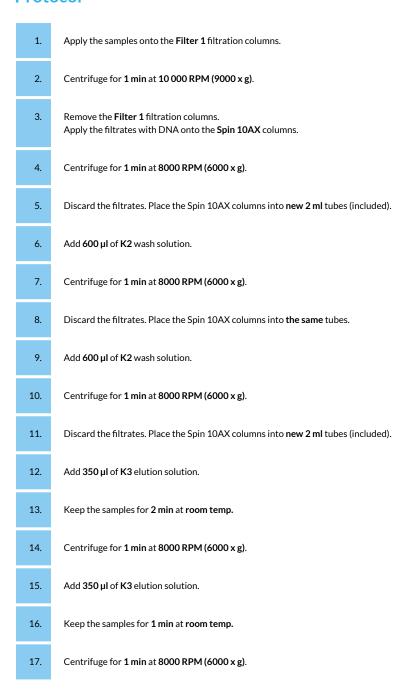

300 µl of L1.4 lysis solution,

20 µl of proteinase K,

20 µl of 1M DTT (not included).

- 3. Vortex for 20 s.
- 4. Incubate at 50 °C until completely dissolved. Vortex the sample from time to time.
- 5. Follow point 1. of the isolation protocol.

## **Protocol**

18.	Remove the Spin 10AX columns. Transfer the filtrates with DNA (~700 $\mu$ l) to new 1.5 ml tubes (not included).
19.	Add 5 μl of precipitation enhancer and 600 μl of isopropanol.
20.	Mix the samples by inverting the tubes a few times and centrifuge for $10  \text{min}$ at $10  000  \text{RPM}$ ( $9000  \text{x}$ g).
21.	Carefully discard supernatant. Be careful not to remove the DNA pellet at the bottom of the tube.  Note. The light-blue DNA pellet should be visible at the bottom of the precipitation tube.
22.	Add 500 μl of 70% ethanol (not included).
23.	Mix the sample and centrifuge for 5 min at 10 000 RPM (9000 x g).
24.	Carefully discard supernatant. Air dry the DNA pellet for <b>10 min</b> at <b>room temp</b> . up-site down.  Note. If there are any leftovers (small droplets) of alcohol on the tube walls they should be removed with sterile cotton buds.
25.	Dried DNA pellets can be dissolved in <b>TE</b> buffer (included), sterile water (not included) or 10 mM Tris buffer, pH 8.0 (not included).
26.	Store the purified DNA at 4 °C until later use.

## Safety Information

DANGER

#### Proteinase K

H315 Causes skin irritation.

H319 Causes serious eye irritation.

H334 May cause allergy or asthma symptoms or breathing difficulties if inhaled.

H335 May cause respiratory irritation.

P261 Avoid breathing dust.

P305+P351+P338 If in eyes: rinse cautiously with water for several minutes. Remove contact lenses,

if present and easy to do. Continue rinsing.

P342+P311 If experiencing respiratory symptoms call a Poison Center or doctor/physician.

WARNING

#### L1.4 lysis solution

H302 Harmful if swallowed.

H315 Causes skin irritation.

H319 Causes serious eye irritation.

 $P305 + P351 + P338 \ If in eyes: rinse cautiously with water for several minutes. Remove contact lenses, and the property of the property of$ if present and easy to do. Continue rinsing.

#### K2 wash solution

DANGER

H225 Highly flammable liquid and vapor.

H319 Causes serious eye irritation.

H336 May cause drowsiness or dizziness.

P210 Keep away from heat, sparks, open flames, hot surfaces. No smoking.

P261 Avoid breathing vapors.

P305+P351+P338 If in eyes: rinse cautiously with water for several minutes. Remove contact lenses, if

present and easy to do. Continue rinsing.

#### K3 elution solution

DANGER

- H225 Highly flammable liquid and vapor.
- H319 Causes serious eye irritation.
- H336 May cause drowsiness or dizziness. P210 Keep away from heat, sparks, open flames, hot surfaces. No smoking.

P261 Avoid breathing vapors.

P305+P351+P338 If in eyes: rinse cautiously with water for several minutes. Remove contact lenses, if

present and easy to do. Continue rinsing.

#### Isopropanol

DANGER

- H225 Highly flammable liquid and vapor.
- H319 Causes serious eye irritation.
- H336 May cause drowsiness or dizziness.
- P210 Keep away from heat, sparks, open flames, hot surfaces. No smoking.

P261 Avoid breathing vapors.

P305+P351+P338 If in eyes: rinse cautiously with water for several minutes. Remove contact lenses, if

present and easy to do. Continue rinsing.
